scan-spurentrennung.sh — guide

Purpose

Gate before every publication: a bundle must contain no contacts, domains or accounts of a foreign work strand and no keys. The script blocks with exit 1.

Setup

1. Put the folder muster/ next to the script (example included).
2. In muster/<strand>.txt enter the patterns of the respective other strands, one regular expression (ERE) per line, # for comments.
3. muster/alle.txt contains key formats forbidden in every strand.
4. Never publish real pattern files; the bundle carries example values only.

Usage

```
./scan-spurentrennung.sh <directory> [--track=<strand>] [--muster=<folder>]
```

Exit	Meaning
0	clean
1	hit, publication blocked
2	usage error

Exceptions

Intentional mentions carry SPUREN-DOC on the same line. The script, the test suite and pattern folders are not checked. Re-scan after every format conversion, because converters strip comments.

Test

```
./test-scan-spurentrennung.sh — seven cases with own test patterns, exit 0 if all pass.
```
